

## Lightweight Timber Deck Steel Beam Bridges

If you need bridge access for light vehicles but there is no need for heavy traffic to pass, then this bridge design is your most cost-effective solution.

This bridge is also ideal for cycleways and pedestrian bridge requirements. It is often a suitable and affordable option for developers and councils who want to improve local community access in a particular area.

### Features:

- Non-climbable handrails and other safety features can be added
- Maximum axle loading of up to 2 tonne per axle, 2.4m wide
- Width can be increased for cycleway and pedestrian bridges

IDEAL FOR >

Light traffic

Pedestrians or cycleways

Reserves

Waihi Beach Reservoir  
10m x 2.4m lightweight timber deck
